ABSTRACT

This research aims at ascertaining the written grammatical errors of students of Inland Girls' Secondary School, Onitsha who are Igbo LI speakers. The purpose of this study is to identify, analyze and explain the common written grammatical errors committed by the Igbo LI speakers of Inland Girls' Secondary School, Onitsha in Anambra State, and to suggest the ways in which these errors can be corrected. Thus, a descriptive survey design was used for this study. Thirty-five (35) Igbo L1 speakers who were students from SSI (14) and SSIII (21) class formed the sample population for this study. The data for the study were generated using the students' written essays on the topics: "Edemedede maka onwe m, Edemedede maka ụlọakwụkwọ m, Edemedede maka onyenkuzi m, Edemedede maka obodo m na edemedede maka onyeisi ụlọakwụkwọ m". The data collected were organized using a simple percentage method, and was analyzed using Corder (1967) theory of error analysis. It was discovered that the students committed many errors ranging from Omission of punctuation mark (52.01%), , English language interference (1.62%), wrong use of the article 'na' (13.13%), spelling errors (7.35%), omission of pronouns (1.39%), Wrong use of punctuation marks (15.35%), wrong use of verbs (0.18%), wrong use of pronouns (1.29%), omission of nouns (2.3%), omission of pronouns (0.14%), wrong use of nouns (2.14%), dialect interference (4.53%), word order displacement (1.03%), omission of the article 'na' (0.69%), and incomplete words/sentences (1.29%). In conclusion, we recommended among others that students should be engaged in competition with reward and also Igbo language teachers should be trained occasionally. All these will constitute to the developing of Igbo language.

Keywords: Igbo language; common written grammatical errors; Linguists.

1. INTRODUCTION

Grammar is an explanation of how the form of word can be changeable and united into sentences in a language [1]. Grammar is the central of the teaching and the basic knowledge to learning language effectively. According to Goh [2], Grammar plays an important role and it is said to be one of the most difficult aspects of language to teach as well as to learn by Byrd [3]. Mickan [4] states grammar analyzes the way the sentences work in the orthography because orthography is one of the skills which is used by people to communicate their ideas, thoughts, feelings and emotions into words and paper.

Language is a sole medium of communication. According to Baker [5], each language has its own patterns to convey the interrelationships of persons and events. The Igbo language is one of the three main Nigerian languages (the others being Hausa and Yoruba). Majority of the native speakers of the language are located in the South Eastern part of Nigeria, precisely in Abia, Anambra, Ebonyi, Enugu and Imo states; while a few other speakers reside in Delta and Rivers states. It also belongs to KWA language family. It is noteworthy that Igbo language is the first language acquired by the speakers in an Igbo cultural setting. This language has expanded with the evidence of being taught in schools, and lots of books written in it for the sole purpose of studies. Igbo language is becoming less frequently spoken or used as the world is becoming a global village and only globalized languages can sustain its tempo. Many languages already have global recognition and influence which English, French, etc of which Chinese is on the great boost currently. Unfortunately, the rate of the growth of Igbo language is very slow as a result of poor language attitude of majority of the speakers. In Igbo natural environment, it should be obviously known that Igbo language is the first language of the inhabitants, but of recent, it is certain that right in Igbo natural setting, English is becoming the first language of the Igbos. As the language gradually loses its authenticity, the younger generation is getting rid of the language at any slight opportunity. Due to the lack of good language attitude, many errors are being made at the course of the language use especially in writing aspect. Error, in the words of Richard et al. (2002) is the use of a word, speech act or grammatical items in such a way it seems

imperfect and insignificant of an incomplete learning. According to Brown [6], an error is a deviation from the adult grammar of native speakers which signifies the inter language capability of the language learners. Error analysis is a procedure used by researchers and educators that includes sampling, identifying errors in the sample, evaluating the seriousness of the error. James [7] defines error analysis as the process of concluding the occurrence, nature, reasons and effects of unsuccessful language. As people are no longer much interested in Igbo language like the earlier years which has caused incomplete mastery of the language. Therefore, a lot of errors are presently being made by the speakers in the production of Igbo language. These errors can be as a result of some linguistic and non-linguistic factors such as incompetency, English language interference, etc. Analyzing the errors made by learners provides many benefits in teaching and learning. Therefore, when concluded, this research will create awareness on the part of the student on their common grammatical errors, and enable them make conscious efforts to improve on their Igbo grammar and correct such error and it will be a torchlight to the teachers in the areas of their teaching that need improvement. Lastly, this research will be useful to all Linguists, Igbo language researchers, scholars, textbook writers, publishers, curriculum planners, who are interested in developing Igbo language.

2. METHODOLOGY

Descriptive survey design was used by the researcher for this study. In the words of Osuji [8], descriptive survey are all those studies which aim at collecting data, analyzing them and describing in a systematic manner the characteristics, features or facts about given population. A descriptive case study aims to present detailed information on a specific phenomenon to get a deep understanding of the case [9]. Purposive sampling technique is to be used by the researcher to select the sample population for this study. In the words Osuji [8], purposive sampling technique is "necessitated when the researcher is interested in certain specified characteristics". Purposive sampling "ensures that only those that meet such required purpose, attributes or characteristics are selected" [8]. The major instrument for the collection of data is by administering Igbo essays to the sample population to the Igbo L1 students.

The researcher will analyze the grammatical errors made by the students from the data she collected using The writer used the approach of error analysis by Ellis [10], this approach of conducting error analysis includes the following steps: collection of a sample of the learner's language, identification of errors, description of errors, explanation of errors and error evaluation. She is then to organize the data using frequency and percentage tables to show the common errors made by the students.

2.1 Population of Study

Population of students in Inland Girls' Secondary School, Onitsha for 2018/2019 academic session.

Table 1. Population of students

Class	Number of Students
JSS1	160
JSSII	102
JSSIII	89
SSSI	95
SSSII	136
SSSIII	86
Total	868

The target population for this study is students of Inland Girls' Secondary School, Onitsha who are Igbo L1 speakers. The table above shows that the total number of students in Inland Girls' Secondary School, Onitsha for the 2018/2019 academic session is 668 students. So the size of the target population for this study is 181 students. As a result of constraints in time and resources, a sample population will be drawn to be the Igbo L1 speakers of SS1 and 3 classes. The Igbo L1 speakers of SS1 and 3 classes are to represent the target population of study.

3. DATA PRESENTATION AND ANALYSIS

Our data is presented using table whereby the common errors committed by each students would be spelt out.

Table 3 shows the frequency and percentage of the sources of errors committed by the students as presented in the Table 1. The simple percentage method was used as it was gotten by 'the number of the error, multiplied by 100 and divided by the total number of the errors'. Example of participant A: $1125 \times 100 = 112500/2163 = 52.01\%$.

3.1 Data Analysis

We will analyze the data by spelling out the common error and stating few examples from the students' essays to back up the argument.

3.1.1 Omission of punctuation mark

- Data: aha onye nkuzi m bu Adaku
Correct version: Aha onye nkuzi m bu Adaku
English translation: The name of my teacher is Adaku
- Data: Amutalam otutu lhe dika ya
Correct version: A mutala m otutu ihe dika ya
English translation: I have learnt many things like it
- Data: Ahurum ya nu anya nke ukwu
Correct version: Ahuru m ya n'anya nke ukwu
English translation: I love her so much

Punctuation marks were omitted as seen in the examples above with underline.

From the data we presented in (1a-c), it is observed that 52.01% of the errors identified were as a result of omission of punctuation mark. Though carelessness abound among students not dotting their 'l's, but the high level of the omission here is a statement that the students still lack mastery in punctuation.

3.1.2 English language interference

- Data: Onyeisi ulo akwukwo aha ya bu Mrs. Omakwuo
Correct version: Onyeisi ulo akwukwo aha ya bu Odoziaku Omakwuo
English translation: The principal whose name is Mrs. Omakwuo
- Data:ma igu otutu novel nke m huru n'anya
Correct version:.....Ma igu otutu akwukwo akuko nke m huru n'anya
English translation:....include reading many novels which I like
- Data: I ji hu na umu akwukwo ya na edebe iwu sukulu ya
Correct version: I ji hu na umu akwukwo ya na-edebe iwu ulo akwukwo ya
English translation: To make sure that her students obey the rules of her school

Table 2. Shows the common errors committed by the students

Sources of errors committed by the students	Omission of punctuation mark	English language interference	Wrong use of verb	Wrong use of pronoun	Wrong use of the article 'na'	Wrong use of punctuation mark	Spelling errors	Dialect interference	Incomplete word/sentence	Word order displacement	Omission of pronoun	Omission of the article 'na'	Omission of noun	Numbers of errors by each students

Table 3. Frequency and percentage of the sources of errors committed by the students 2163

S/N	Sources of errors	Frequency of errors	Percentage of errors
1	Omission of punctuation mark	1,125	52.01%
2	English language interference	35	1.62%
3	Wrong use of verb	04	0.18%
4	Wrong use of pronoun	28	1.29%
5	Wrong use of the article 'na'	284	13.13%
6	Wrong use of punctuation mark	332	15.35%
7	Spelling errors	159	7.35%
8	Dialect interference	98	4.53%
9	Incomplete word/sentence	28	1.29%
10	Word order displacement	22	1.03%
11	Omission of pronoun	30	1.39%
12	Omission of the article 'na'	15	0.69%
13	Omission of noun	03	0.14%
	Total	2,163	100%

English language interference occurred in the essays of the student as shown above in the underlined words.

From the data we presented in (2a-c), it is observed that 1.62% of the errors identified were as a result of English language interference. Students' knowledge in Igbo grammar is not sufficient in mastering Igbo equivalence of some English words. By this, they intentionally place the English term in order to keep their thoughts flowing.

3.1.3 Wrong use of verb

- a. Data: Adimu ogologo
Correct version: Etoro m ogologo
English translation: I am tall
- b. Data: o di oge o mara mma
Correct version: E nwere oge o mara mma
English translation: There was a time she was beautiful

Inappropriate verbs were used in the above examples.

From the data presentation in (3a-c), it is observed that 0.18% of the errors identified were as a result of wrong use of verb. Even though this aspect is not rampant, but it does exist. The students tend to use any verb form they assume that fit in, which could be as a result of insufficient grammar consciousness.

3.1.4 Wrong use of pronoun

- a. Data: Aha mu bu Nwada Ogor Chidera
Correct version: Aha m bu Nwada Ogor Chidera
English translation: My name is Miss. Ogor Chidera
- b. Data: Ahuru m onwe mu nanya
Correct version: Ahuru m onwe m n'anya
English translation: I love myself
- c. Data: Ana mu agu akwukwo mu nke oma
Correct version: Ana- m agu akwukwo m nke oma
English translation: I read my books very well

Wrong use of pronouns were also observed from the examples above.

From the data we presented in (4a-c), it is observed that 1.29% of the errors identified were as a result of wrong use of pronoun. Many students simply place any pronoun which

seemingly sounds or looks compatible in the sentence. This is as a result of not being acquainted with rules of grammar.

3.1.5 Wrong use of the article 'na'

- a. Data: Abu m nwa na erube isi
Correct version: Abu m nwa na-erube isi
English translation: I am an obedient child
- b. Data: onye nkuzi m huru na anya nke ukwu
Correct version: Onye nkuzi m huru n'anya nke ukwu
English translation: The teacher whom I love so much
- c. Data: Obu ulo akwukwo di na Anambra
Correct version: O bu ulo akwukwo di n'Anambra
English translation: It is a school situated in Anambra

Wrong use of the article na were observed in the above examples as shown in the underlined words and the correct forms were written below each.

From the data we presented in (5a-c), it is observed that 13.13% of the errors identified were as a result of wrong use of the article 'na'. The intense of the wrong usage of 'na' among students is alarming. This is a proof that grammar has not been mastered by the students.

3.1.6 Wrong use of punctuation mark

- a. Data: Aha obodom bu lhechiowa
Correct version: Aha obodo m bu lhechiowa
English translation: The name of my town is lhechiowa
- b. Data: Nwaanyi bu ezigbo Omumaatu
Correct version: Nwaanyi ahụ bu ezigbo omumaatu
English translation: That woman is a good example
- c. Data: Onyenkuzi mara ihe nke ukwu, o bu onye esi ama atu
Correct version: Onyenkuzi m maara ihe nke ukwu. O bu onye eji ama atu.
English translation: My teacher is wise. She is being proud of.

Wrong use of punctuation marks were observed in the above examples as shown in the underlined words.

From the data we presented in (6a-c), it is observed that 15.35% of the errors identified were as a result of wrong use of punctuation mark. It is one thing to know all the punctuation marks; it is another thing to rightfully place them in a statement.

3.1.7 Spelling errors

- a. Data: Nmeme iwa oji
Correct version: Mmemme iwa oji
English translation: Ceremony of breaking of kola
The spelling of the word *nmeme* was not rightly spelt.
- b. Data: ayi wekara mmiri
Correct version: Anyi nwekwara mmiri
English translation: We also have stream
The spelling of the word ayi wekara was not rightly spelt.
- c. Data: na ofe ogusi na okoro
Correct version: Na ofe egwusi na okwuru
English translation: And melon soup and okro

The spelling of the word ogusi was not rightly spelt.

From the data we presented in (7a-c), it is observed that 7.35% of the errors identified were as a result of spelling errors. This is mostly cause through the carelessness of students. Also, negligence to excellence causes such as well. Lastly, none mastery of Igbo right spelling of words put a student in such a quagmire.

3.1.8 Dialect interference

- a. Data: Ihe ndi anyi na-amacharo
Correct version: Ihe ndi anyi na-amachaghi
English translation: Things we do not know
- b. Data:mana m aburo komputa ma ihe nile
Correct version: ...Mana m abughị komputa ma ihe niile
English translation: ...But I am not a computer that knows all things
- c. Data: adiro m eme okacha mara
Correct version: Adighi m eme okacha mara
English translation: I do not behave like I know it all

Dialectal negative marker ro was used instead of the standard form ghi in example (8a-c).

From the data we presented in (8a-c), it is observed that 4.53% of the errors identified were as a result of dialect interference. It is not a gainsay that dialect interference is a daily battle being fought in achieving standard language form. This is not exempted in Igbo language as we see dialects interfering here and there in students' essays. This could also be the fault of the teachers who failed to give the students the accurate standard forms of the words.

3.1.9 Incomplete word / sentence

- a. Data: o bu onyenkuzi ma_ra akwukwo nke ukwu
Correct version: O bu onyenkuzi maara akwukwo nke ukwu
English translation: She is a very brilliant teacher
- b. Data: onye isi uloakwukw_ m bu nwaanyi
Correct version: Onyeisi ulokwukwo m bu nwaanyi
English translation: The head of my school is a female

In the above instances, it was observed that certain words were incomplete as shown in underlined words.

As we can see from the data presented in (9a-b), 1.29% of the errors identified were as a result of incomplete word/ sentence. The insufficiency in the knowledge of Igbo language could be attributed to this error whereby a student is choked up in a word or sentence and decide to jump it and continue with others.

3.1.10 Word order displacement

- a. Data: di nime Anambra steeti
Correct version: Di n'ime steeti Anambra
English translation: In Anambra state
Word order displacement was observed in the above example.
- b. Data: Enwere m ihu okirikiri
Correct version: Enwere m okirikiri ihu
English translation: I have a round face
Word order displacement was observed in the above example.
- c. Data: Abum onye Abia steeti di n'okpuru ochichi Bende Local Government Area.
Correct version: Abu m onye okpuru ochichị Bende nke di na Steeti Abia
English translation: I am a native of Bende Local Government Area of Abia State.

Word order displacement was also observed in the above example.

From the data we presented in (10a-c), it is observed that 1.03% of the errors identified were as a result of word order displacement. Lack of knowledge of Igbo syntax or rules of grammar is the cause of this error.

3.1.11 Omission of pronoun

- a. Data: Onyenkuzi _ mara ihe nke ukwu
Correct version: Onyenkuzi m maara ihe nke ukwu
English translation: My teacher is very wise.
- b. Data: adi _ oji
Correct version: Adjị m oji
English translation: I'm dark in complexion
- c. Data: obodo _ bu obodo buru ibe nke ukwu
Correct version: Obodo m bu obodo buru ibu nke ukwu
English translation: My town is a very big town

It was observed that the pronoun I was omitted in all the instances.

From the data presentation in (11a-c), it is observed that 1.39% of the errors identified were as a result of omission of pronoun. The percentage of this error could be said to be as a result of none mastery of rules of grammar and its application.

3.1.12 Omission of the article 'na'

- a. Data: otutu ndi nkuzi m _ uloakukwo m huru m n'anya
Correct version: Otutu ndị nkuzi m n'ulo akwukwo m huru m n'anya
English translation: Some of the teachers in my school love me
- b. Data: ahuru m ulo akwo m _ anya
Correct version: Ahuru m ulo akwukwo m n'anya
English translation: I love my school
- c. Data: ulo akwukwo m bu sonso umu nwanji bu ndi na agu _ ya
Correct version: Ulo akwukwo m bu naanị umu nwanji bu ndi na-agu na ya
English translation: My school is girls' school

It was observed that the article na was omitted in all the instances.

From the data we presented in (12a-c), it is observed that 0.69% of the errors identified were

as a result of omission of the article 'na'. Though this error is not rampant, it could be said that non mastery of Igbo grammar is the cause of the error.

3.1.13 Omission of noun

- a. Data: o bu _ Enugu state
Correct version: O bu onye Enugu state
English translation: She is from Enugu state

It was observed that the noun onye was omitted in the above instance.

- b. Data: obodo udo na achi ___ ihe na agakwara n'ihu nke oma
Correct version: Obodo udo na-achị na ndị ihe na-agakwara n'ihu nke oma
English translation: A town where peace reigns and things are working well for the inhabitants.

It was observed that the noun ndi was omitted in the above instance.

From the data we presented (13a-b), it is observed that 0.14% of the errors identified were as a result of omission of noun. This could be basically due to negligence or unconsciousness to excellence. Not having the knowledge of Igbo grammar is a little cause of this error.

4. SUMMARY, CONCLUSION AND RECOMMENDATION

This research tends to check out the errors in Igbo grammar by the students of Inland Girls' Secondary School Onitsha; through the parameters of omission of punctuation mark, English language interference, wrong use of verb, wrong use of pronoun, wrong use of the article 'na', wrong use of punctuation mark, spelling errors, dialect interference, incomplete word/sentence, word order displacement, omission of pronoun, omission of the article 'na' and omission of noun. From the data collected and analyzed, it is observed that the commonest error by the students is omission of punctuation mark which has 52.01% of the errors. Igbo language, being filled with diacritics should not be ignored as an omission of a single dot could change the meaning of a word. Wrong use of the article 'na' having 13.13% would not be overemphasized.

Thus, this error can be said to have occurred as the students do not have mastery in Igbo grammar and then write what seemed right to them.

4.1 Conclusion

The research explored the errors as committed by the students using Inland Girls' Secondary School Onitsha as an example. The researcher observed that 52.01% of the errors identified were as a result of omission of punctuation mark, 1.62% of the errors identified were as a result of English language interference, 0.18% of the errors identified were as a result of wrong use of verb, that 1.29% of the errors identified were as a result of wrong use of pronoun, 15.35% of the errors identified were as a result of wrong use of punctuation mark, 7.35% of the errors identified were as a result of spelling errors, 4.53% of the errors identified were as a result of dialect interference, 1.29% of the errors identified were as a result of incomplete word/ sentence, 1.03% of the errors identified were as a result of word order displacement, 1.39% of the errors identified were as a result of omission of pronoun, 1.39% of the errors identified were as a result of omission of pronoun, 0.69% of the errors identified were as a result of omission of the article 'na' and 0.14% of the errors identified were as a result of omission of noun. The researchers draws the conclusion that the most dominant error are errors identified as a result of omission of punctuation mark. The percentage of error can prove it, that is, 52.01%. The sources of such errors and also the solution to the problems; were presented. The study has been able to create awareness to the students towards the errors they commit which will enable them make more efforts in improving on their grammar in Igbo language. Secondly, the research also provides data to language for the teachers to know the area of weaknesses of their students and to help them to improve in those areas. Thus, we do not only explore the errors, we also pose the necessary and recommendable solutions.

4.2 Recommendation

In order to improve the knowledge of Igbo language by the students, few recommendations should be helpful;

- i. There should be regular award winning event or competitions among the students

which will spur them in seeking the knowledge of the language.

- ii. There should be regular training for the Igbo teachers as to equip them with the necessary tools for effective teaching; as it has been said that 'a man cannot give what he does not have'.
- iii. Government should set a committee that will foresee the implementation of Igbo speaking and writing in various schools in the region, as this will put the consciousness of the language in the heart of every student.
- iv. Comprehensive study materials should be made available to the students as this will aid their learning.
- v. Lastly, the teacher should always call the attention of the students whenever there is error and also give them the right ones.
